Empathy Map Canvas:

An **Empathy Map Canvas** is a simple and easy-to-understand visual tool that helps capture a user's thoughts, feelings, actions, and experiences. It enables the project team to better understand the needs, expectations, challenges, and behaviors of the end user.

Creating an effective solution requires understanding the real problem from the user's perspective. The empathy mapping process helps identify what users **think, feel, see, hear, say, and do**, along with the **pain points** they experience and the **gains** they expect. This understanding assists in designing a user-centered solution that effectively addresses their requirements.

For the **Help Desk Ticket Management System**, the empathy map focuses on employees who raise support tickets and interact with the IT support team. It highlights their expectations for quick issue resolution, transparent ticket tracking, timely updates, and an efficient support process.

Project Name

Help Desk Ticket Management System

User Persona

Employee of an organization who requires IT support

The empathy map helped identify the needs, expectations, challenges, and goals of employees using the Help Desk Ticket Management System. Understanding the user's perspective enabled the development of a solution that provides efficient ticket management, automated workflows, timely notifications, and improved communication between employees and the IT support team.
